

SERIES 6R REVERSIBLE FANS

Automatic radiator cleaning and efficient cooling all in one.

QUALITY APPROVED BY
JOHN DEERE

Clean radiators - Save time and fuel

Gone are the days of work interruptions and unproductive downtime!

Reversible fans from Cleanfix® are now available for the John Deere 6R Series.

Cleanfix® reversible fans cool as required, thanks to the variable blade adjustment - which protects the engine and other assemblies. At the push of a button, the fan blades rotate on their own axis and **powerfully clean radiators and filters**. With the clean radiator and the improved cooling, the Cleanfix® reversible fan blades always run with the most efficient blade angle and therefore require less drive power. The resulting effect is **more power available at the PTO shaft and the wheels**. The variable blade pitch adjustment **saves horsepower resulting in fuel savings**.

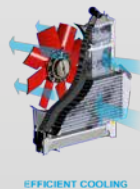

Cleanfix reversible fans are **John Deere Approved!**

When purchased and installed by your John Deere dealer, you'll get a **1 year Cleanfix® warranty!**

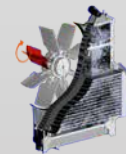

All John Deere vehicle warranties remain valid!

Cooling as required

The thermally controlled fan blades adjust to the required cooling needs. The less cooling capacity that is required, the Cleanfix® fan blades decrease in blade pitch. The decreased blade angle reduces the power consumption of the fan. In addition, the Flex-Tips on the blade tips increase the airflow, causing the blade to stay longer in the lower blade and energy-saving position.

EFFICIENT COOLING

REVERSE AT FULL RPM

PRESSURE CLEANING

Automatically reverses

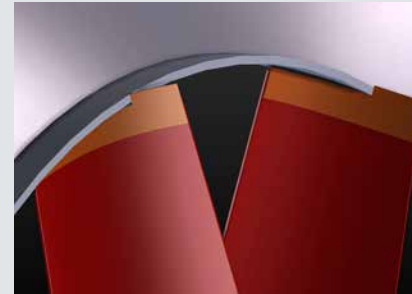

At full engine speed, the Cleanfix® reversible fan can reverse to the cleaning mode at the press of a button.

Powerful cleaning

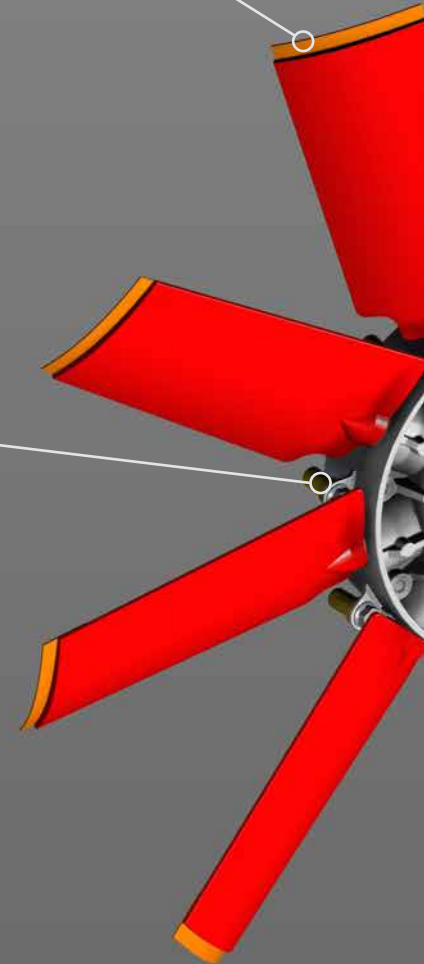

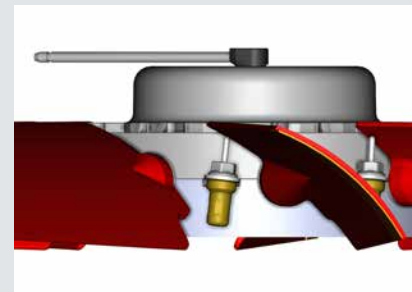

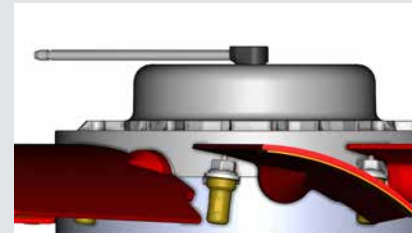

With the blade position in the cleaning mode, the Cleanfix® reversible fan guarantees a high cleaning air flow and cleaning pressure. This provides maximum cleaning power.

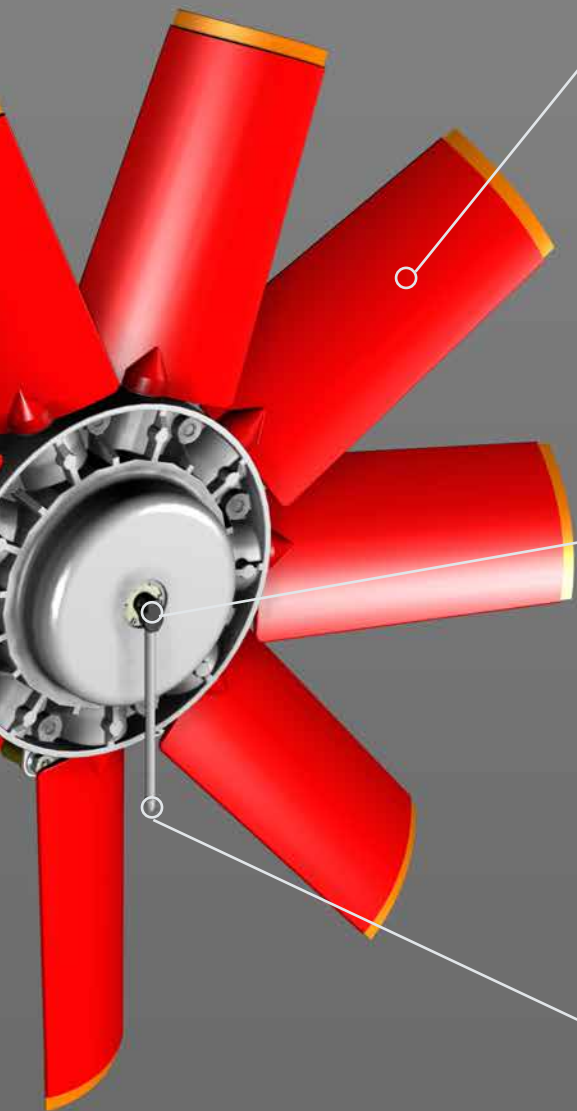

Flex-Tips

The extensions on the blade tips reduce the gap between the radiator shroud and fan to a minimum! This increases the airflow, therefore the blades stay longer in the lower blade and energy-saving position.

Thermal actuators adjust the blade angle to meet the cooling requirements of the engine.

The reversing of the fan blade through the cross position guarantees optimum blade position and therefore efficient cooling and powerful cleaning.

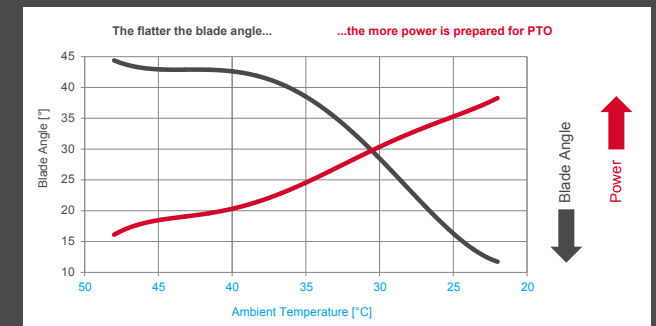

Without electronics, without interfering with the ECU.

Connection to the compressed air system.

Customer benefits:

- Always have a clean radiator through regular, convenient Cleanfix® cleaning
- No annoying work interruptions and unproductive downtime
- Optimal, efficient cooling, customized to your requirements
- Fuel savings from clean radiators
- Additional power for the PTO shaft and wheels compared to dirty radiators
- Environmentally friendly
- John Deere Approved Quality
- 1 year Cleanfix® warranty
- All John Deere vehicle warranties remain valid

Cooling as required:

Cleanfix® kits for the John Deere 6R series are available for:

- 6145R, 6155R
- 6175R, 6195R, 6215R

Cleanfix® kits for vehicles with compressed air systems

Cleanfix® kits for vehicles without compressed air systems
